

Draft2: Identify existing schema(s) and a test corpus

O a table listing existing relevant schemas that you plan to use. The table should include the schema name, its abbreviated namespace (prefix), and its full namespace.

Schema Name	Prefix	Full Namespace
Schema.org Product	schema	https://schema.org/
Dublin Core	dc	http://purl.org/dc/elements/1.1/
FOAF	foaf	http://xmlns.com/foaf/0.1/
Good Relations	gr	http://purl.org/goodrelations/v1#

O a paragraph describing justifications to why these schemas are needed

Schema.org is used to describe product attributes (ingredients, brand, category); Dublin Core for metadata standardization; FOAF for structuring user profiles; and Good Relations for expressing product-consumer relationships.

O (if any) a paragraph describing schemas that are irrelevant to your domain, but the elements/vocabulary structure is helpful for you to draft your schema

Darwin Core — though unrelated in domain, its hierarchical approach to classifying specimen attributes is referenced for structuring ingredient classification and product property design.

O a list of 10 objects and short descriptions of what they are

#	Object	Description
1	Round Lab Dokdo Toner	Hydrating toner for sensitive skin

#	Object	Description
2	COSRX Snail Mucin Essence	Regenerating and moisturizing functional essence
3	Anua Heartleaf Toner	Toner targeting trouble-prone skin and pores
4	Beauty of Joseon Relief Sun	Brightening functional sunscreen with SPF/PA attributes
5	Innisfree Black Tea Serum	Anti-aging serum for mature skin concerns
6	HERA Black Cushion	High-coverage cushion foundation
7	Dry Skin User Profile	Female in 30s, focused on hydration, avoids fragrance
8	Oily Skin User Profile	Male in 20s, focused on sebum control, prefers watery texture
9	Summer Usage Context	Contextual factors in hot and humid weather conditions
10	Skincare Routine Set	Step-by-step routine (toner > essence > cream) for modeling product relationships
